TECHNICAL SKILLS

Cloud & Containers

AWS / EKS · GCP / GKE · Azure · OVH · Scaleway

Infrastructure as Code & GitOps

Terraform · Terragrunt · Ansible · FluxCD · ArgoCD

CI/CD & Automation

Github Actions · GitLab CI · Jenkins · Airflow

Languages

Python · Go · Typescript

Observability

Prometheus · Grafana · Loki · Tempo · OpenTelemetry · Datadog · Incident.io

Data

Kafka · Elasticsearch · PostgreSQL · Slurm

Compute

Slurm · CUDA · InfiniBand

EDUCATION

Professional degree in Network Administration and Security

2008

Technology degree in Networks and Telecommunications

2007

ADDITIONAL INTERESTS

Trail running
Home automation
Home improvement

PROFESSIONAL SUMMARY

Senior DevOps Engineer with 10+ years of experience automating and operating software delivery, infrastructure provisioning and production platforms. Bridging DevOps, Platform Engineering and SRE, with a proven track record of building scalable, reliable and cost-conscious environments across AWS, GCP and bare metal using Terraform, Kubernetes, GitOps, CI/CD and observability tooling. Adaptable to diverse technical and organizational contexts, with a focus on pragmatic solutions that improve reliability and delivery.

PROFESSIONAL EXPERIENCE

Senior Blockchain Engineer (SRE + Devops)

2022 - 2025

Kiln · kiln.fi

Built and scaled infrastructure for staking and API services during a period of rapid growth (4 to 12 DevOps engineers, 200 to 2,000 CPUs, and 3 to 30+ blockchains).

- Provisioned, operated and monitored multi-cluster, multi-environment and multi-cloud infrastructure (**AWS, GCP, Scaleway and bare metal**) using IAC (**Terraform**) and Gitops (**Kubernetes, FluxCD**). Introduced workload cost forecasting and optimisation.
- Integrated, monitored, automated and reported on validator and full-node software across 30+ blockchains, including **Ethereum, Solana, TON, Polkadot, Tezos and Avalanche**, with some tooling developed in **Go**.
- Designed and promoted shared developer and CI/CD tooling, including **GitHub Actions** templates, ingress and gateway patterns, cross-cluster standards and developer laptop tooling.

DevOps Engineer

2020 - 2021

Altair Engineering

Owned infrastructure, packaging and release processes for a multi-cloud HPC resource auto-deployment platform.

- Designed, built and maintained baseline deployment methods across seven cloud providers, using **Kubernetes, K3s and Docker Compose**.
- Built and integrated CI/CD platforms for automated testing and deployments; led the migration from **Jenkins** to **GitlabCI**
- Integrated observability capabilities into the product, including **Grafana, Tempo tracing and Loki**.

System Reliability Engineer

2018 - 2019

BlaBlaCar · Paris

Owned data infrastructure and contributed to the design of the company-wide infrastructure platform.

- Operated, monitored and maintained MariaDB, Elasticsearch, Hadoop, Cassandra and Redis clusters. Partnered with developers to optimise queries and ensure consistent performance.
- Co-designed and automated Kafka, Airflow and Vertica tooling, and developed data pipelines for large-scale processing and analytics.
- Contributed to the migration strategy from existing Kubernetes platforms to GKE, including interim service-mesh optimisation work.
- Redesignated a multi-layer persistent Nginx API cache, sustaining a 99%+ cache-hit-rate SLI to third-party APIs.

HPC / Big Data Systems Engineer

2014 - 2018

French Ministry of Defence · Paris

Contributed to the cluster and data platform team, providing platform operations and technical guidance for HPC and Big Data workloads.

- Selected, benchmarked, integrated and provisioned hardware with suppliers, tailoring configurations to HPC and Big Data workloads.
- Automated provisioning and configuration at scale through **Python** scripts and microservices built around **Puppet**.
- Analyzed customer applications to improve workload performance.

Systems Engineer, E-commerce

2013 - 2014

Galleries Lafayette · Paris

Maintained the three-tier web platform and product publishing workflows.

- Designed delivery architecture with test platforms and automatic builds.
- Integrated metrology tools for capacity planning and marketing analysis.

HPC Systems Engineer

2013

OVH GS - Oxalya · Paris

Deployed dedicated HPC clusters at customer sites.

- Integrated a shared compute-on-demand service.
- Compiled, optimized and benchmarked scientific workloads.

Production Engineer

2010 - 2012

DCNS · Cherbourg

Installed and maintained internal services and daily data processes.

- Developed a framework for traceable and secure deployments across many instances.

Systems administrator in mobile networks

2008 - 2010

Alcatel-Lucent

Hardware and software deployment for "billing" platforms, integrate to client "operator network", testing and benchmarking before production.

- Bootstrap linux or Solaris nodes, push standard configurations, deploy custom services and billing plans according to needs

Internships

2007 - 2008

DeployedVoIP and internal services. Developed a PHP CMS plugin for network emulated file transfer.
