CORE EXPERTISE

Infrastructure / Deploy

Terraform AWS GCP / GKE

Kubernetes K3S Helm

FluxCD Jenkins GitLab CI

Ansible

Observability

Prometheus Grafana Loki

Tempo ELK Fluentd

Development

Go Python Shell Django

Kubernetes operators

Data / HPC

Kafka Cassandra MariaDB

MongoDB Ceph Slurm

CUDA InfiniBand RDMA

EDUCATION

Professional degree in Network Administration and Security

2008

Technology degree in Networks and Telecommunications

2007

INTERESTS

Trail running
Home automation
Home improvement

PROFILE

Senior infrastructure and reliability engineer with 15+ years of experience across SRE, cloud, DevOps, HPC and Big Data. I design pragmatic platforms that balance performance, security, scalability and cost, from bare-metal clusters to multi-cloud Kubernetes environments.

EXPERIENCE

Senior Blockchain SRE

2022 - 2025

Kiln · kiln.fi

Stack: AWS, Kubernetes, bare metal, Helm, FluxCD, Tempo, staking

Scaled and specialized infrastructure during rapid growth in clients, teams and protocol diversity. Architected AWS and bare-metal infrastructure for 300 to 500 nodes, integrated and supported validators across 30+ blockchain protocols, and automated validation performance improvements.

DevOps Engineer

2020 - 2021

Altair Engineering

Stack: Kubernetes, Docker, MongoDB, Python, Grafana, K3S, GitLab CI

Owned infrastructure and release processes for a multi-cloud HPC resource deployment platform. Managed test configurations across seven clouds, delivered highly available Kubernetes and on-premise K3S deployments, and built integrations for monitoring and tracing. Refactored pkr and migrated Jenkins tests to GitLab CI.

System Reliability Engineer

2018 - 2019

BlaBlaCar · Paris

Stack: Kubernetes, Docker, Go, Prometheus, Nginx, BGP, Istio, Kafka

Designed and operated data clusters including MariaDB, Hadoop, Vertica, Cassandra and Redis, as well as Kafka, Kafka Connect and Airflow data tooling. Reworked the multi-layer Nginx API cache to maintain a 99%+ hit rate, migrated databases to GKE and redesigned the logging stack.

HPC / Big Data Systems Engineer

2014 - 2018

French Ministry of Defence · Paris

Stack: Puppet, Linux, Python, Django, Ceph, InfiniBand, GPU

Selected, deployed and maintained bare-metal clusters. Integrated and optimized HPC and Big Data platforms, developed Python daemons, APIs and web services, and analyzed customer applications to improve workload performance.

Systems Engineer, E-commerce

2013 - 2014

Galleries Lafayette · Paris

Stack: Apache, Varnish, Tomcat, Oracle, Hybris, Graphite

Maintained the three-tier web platform and product publishing workflows. Designed delivery architecture with test platforms and automatic builds, and integrated metrology tools for capacity planning and marketing analysis.

HPC Systems Engineer

2013

OVH GS - Oxalya · Paris

Stack: Linux, Slurm, Lustre, InfiniBand, Nvidia GPU

Deployed dedicated HPC clusters at customer sites, integrated a shared compute-on-demand service, and compiled, optimized and benchmarked scientific workloads.

Production Engineer

2010 - 2012

DCNS · Cherbourg

Stack: Linux, Oracle, JBoss, Apache, Tomcat, Java, Centreon, Control-M

Installed and maintained internal services and daily data processes. Developed a framework for traceable and secure deliveries across many instances.

Intelligent Network Systems Technician

2008 - 2010

Alcatel-Lucent

Assignments: Bell M (Canada), OTE (Greece), Orange (Dominican Republic)

Independently delivered Intelligent Network application clusters at customer sites, covering hardware installation, storage and system configuration, service deployment and testing.

Network Administrator / PHP Developer

2007 - 2008

MMF Services · Solstys

Configured network infrastructure and web services, then integrated the WebDAV protocol into a CMS product using PHP.
